1. Indonesian Wooden Radio Succeeds with Good Design

One Indonesian industrial designer has pioneered an innovative business that has rejuvenated the economy of a farming village and improved the sustainability of local forests - and he's doing it all with wood.

A range of wooden radios (wooden-radio.com) hold pride of place for the Magno brand (<http://www.magno-design.com/?id=wr01a>), which has carved out a niche as a maker of high-quality, crafted products that marry traditional skills with modern design. Magno is creating jobs and skills while also creating a unique, exportable product that commands a good price.

Indonesian designer Singgih Susilo Kartono developed the radio design concepts while at the Faculty of Fine Art and Design in Bandung, Java, Indonesia in the 1990s.

He takes an organic approach to designing, enjoying the journey and not necessarily being sure where he is going.

"I never start my design according to the market research or demand. I design by absorbing events, global or local events and even mundane daily life things that happen around me. Consequently, I start to think what will be good and better for these people," he explains in his brochure.

The workshop in which the radios are made is a handsome wooden-roofed building and craftspeople sit at long wooden tables to assemble the models.

Each radio is made from a single piece of wood and takes a craftsman 16 hours to construct, drawing on traditional woodworking skills. The radios are made from Indian rosewood, which is often used to manufacture many musical instruments because of its excellent sound resonance.

The radios are made in stages, with more than 20 steps involved in assembling each one. The individual parts are precision cut by machines before being assembled using a tongue and groove (http://en.wikipedia.org/wiki/Tongue_and_groove) construction technique.

Some radio models have a chunky, retro appearance and mix dark and light wood to give an eye-pleasing contrast. Others are more modern designs with a sleek profile. There is a large version, a 'Mini', a sleek modern Cube' version and a rectangular version. There is also a round clock and a wooden desktop office set with various essentials like a wooden stapler.

The radios sell for between Euros 99 (US \$124) and Euros 220 (US \$276), and are shipped to Europe via Singapore to Hamburg in Germany.

"To me, wood is somewhat a perfect material - especially if I compare it to synthetic ones," Kartono said. "In wood we could find strength and weakness, advantages and disadvantages or roughness and also softness. Wood is hard and solid but yet it is 100 per cent eco-friendly as it is degradable and leaves no waste materials on the earth."

Great care is taken in selecting the wood and ensuring it is from local, sustainable plantation sources. According to its website, Magno used 80 trees in 2010 for its radios but in turn planted 8,000 trees around the village. This regeneration has become part of the process of creating the radios.

Magno has won numerous awards, including the Brit Design Award (UK), Design Plus Award (Germany), Good Design Award/G-Mark (Japan) and the Indonesia Good Design Selection Awards.

"The wood I use for the manufacturing process may need as long as 50 years to reach maturity," Kartono said. "I want people not only to think about exotic or precious woods but likewise about the fact that good things require time. All objects that surround us should be thought-provoking. Craftsmanship originally was the art of dealing with raw

materials in a sensible and economical way."

As Kartono tells it, he faced the typical university graduate's dilemma about his career path. Should he work as an in-house designer in a city or return to his home village of Kandangan and start a business? His choice was unusual. Once somebody with a university education leaves a small village, it is rare they return. And at first, Kartono did not.

But he was drawn back by the dire situation in the village, and decided to apply his knowledge of product design to revive its economic fortunes. He started by visiting just twice a year because that was all he could afford. This had the advantage of giving him perspective on the situation in the village.

"At first glance, these changes (happening to the village) were seen as a 'progress,'" he said. "But when I looked more closely I concluded that it was only the 'surface' which experienced change. The basic structure of the village did not undergo any changes; moreover, some was actually deteriorating."

He concluded that the village was being damaged by various government attempts to modernize agricultural practices. The debt problems this caused meant many farmers lost their farms and were forced to seek work in the city or look for another way to make money.

Craft work seemed to be the answer to this problem. It has many advantages, as Kartono sees it. It is something that can grow and fits well with village lifestyles. It is labour intensive, doesn't need sophisticated technology and can use already existing local resources.

Kartono was inspired by one of his teachers at university, an advocate of the 'New Craft' approach, which applies modern management techniques to traditional craftsmanship. The idea is simple but very effective. It begins with making sure every step of the manufacturing process is standardized to ensure consistent quality and materials. A new product or design is first broken down into steps and a product manual is put together. Only then is the manufacturing process carried out.

While the New Craft method sounds simple and obvious, many craft makers do not take this approach. By following this methodology, it is possible to quickly train new craft workers and start up manufacturing in a new village or community. Craft is increasingly being seen as a good way to re-employ people who formerly worked in farming. The New Craft approach can create high-quality products that would sell well in the export market. A common problem with crafts is either poor quality control or inconsistent manufacturing methods. This can feed stereotypes of craft products and make them look second-rate in comparison to machine-manufactured products in the marketplace.

"Design for us is more than just creating a well-designed product that is produced and consumed in colossal amount," Kartono said. "Design must be a way to solve and minimize problems."

2. Gobi Desert Wine to Tackle Poverty and Boost Incomes

In the arid Gobi desert spanning the two Asian nations of China and Mongolia is a bold attempt to make wine and reduce poverty. The environment is harsh, with temperatures swinging from sub-zero winter cold to sweltering summer heat. The desert is also home to high winds and notorious dust storms that plague China's capital Beijing every year.

China's wine industry is booming as people have embraced the drink's perceived health-giving qualities and are using it to celebrate new-found wealth as the economy has flourished. Current wine consumption in China is half a litre per person per year, low compared to the French average of 55 litres a year. But this is growing quickly.

Well-known brands include Great Wall, Dynasty and Changyu (<http://www.changyu.com.cn/english/index.html>), which is considered the world's 10th largest wine producer.

One innovative winery is using this wine boom to tackle poverty and increase local wealth.

Chateau Hansen (hansenwine.com) in Inner Mongolia has been operating since the 1980s, but recent expansion and modernization have significantly increased its earning power and the number of people it employs. Located in an area with high levels of poverty, it has developed a successful wine business in the desert by tapping the plentiful water supplies from the Yellow River. The area is now considered one of the best for growing wine grapes in China.

Located near Wuhai city (<http://en.wikipedia.org/wiki/Wuhai>), 670 kilometres west of Beijing, Chateau Hansen has 250 hectares of Merlot, Cabernet Sauvignon and Cabernet Gernischt grapevines.

The vines are buried under the sand to protect them from the harsh weather in the winter.

"The lowest temperature gets down to is below -20 degrees C (Celsius), but in summer, it can reach 38 or 40 degrees C (102 or 104 F)," Li Aixin, Chateau Hansen's head of viticulture, told MSNBC. "Here the four seasons are good for the growth of the grapes, but in the winter we need to bury them in the earth" to keep them from freezing.

Hansen has been ambitious in its approach. It has a European-style chateau, hotel and even a French wine expert, Bruno Paumard, on site to help with the wine making. The chateau's cellar now stores 1,000 barrels of wine.

Paumard arrived in China in 2005. He has thrown himself into Chinese culture and tasted and tested the country's wines. Hansen has produced 400,000 bottles of wine, mostly sold in China, where red wine drinking has become a big part of the culture of celebration.

Hansen sells the majority of its wine to government organizations and regional enterprises. It has seen its profits double to 100 million yuan (US \$18 million) in 2011 and hopes sales will double again in 2012.

"Eighty per cent of the market in China is really the local governments who encourage the enterprises in their cities to consume red wine, of a certain brand, at their banquets in the place of Chinese 'baijiu' for their incessant and never-ending toasts," said Paumard, referring to China's home-grown rice wine. "So it's actually a market that's totally unique."

Hansen's Cotes du Fleuve Jaune du Desert de Gobi has become one of the biggest award-winning wines in China. It received a bronze medal from the International Wine Challenge of Blaye, near Bordeaux, France.

China now stands as the world's fifth-largest consumer of wine (International Wine and Spirit Research study) (<http://www.iwsr.co.uk/>). The market in China is forecast to grow by 54 per cent from 2011 to 2015, adding up to a billion bottles.

A map of China's vineyards and their terroir or soil conditions shows a diverse wine-making sector (<http://www.hansenwine.com/english/vineyardlink.html>).

In this busy marketplace, Hansen prides itself on being organic. It also has the goal of turning the arid desert into green vineyards using irrigation from the Yellow River and groundwater. It wants to create employment and raise living standards in the region and is fitting into a national strategy to raise living standards for poor regions.

There is a training programme for the around 400 workers employed by the winery. No pesticides are used and only sheep dung is used as a fertilizer provided by 3,000 sheep on site. Trees also play a role in providing humus (<http://en.wikipedia.org/wiki/Humus>) for the vines. There is also accommodation in a nearby village for the employees.

There are 250 hectares of vineyards and the grapes are harvested by hand. Expansion began in 2001 when the chateau and winery were built. It is strategically located just 500 metres from an airport and the chateau has a luxury hotel. Around 20,000 people visit a year, according to Hansen's website, bringing in further income for the winery. The winery also uses Mongolian culture and cuisine as a selling point to attract tourists.

The chief executive of Hansen is Han Jianping, who made his first fortune in real estate development.

Han believes that "the momentum of growth in the wine industry is huge."

"With a great foundation of more than 1 billion people as we have in China, and (the industry) growing at 20 or 30 per cent a year, there is a huge potential for more growth," he said.

3. Mauritanian Music Shop Shares Songs and Friendship

Around the world, traditional music stores selling vinyl records, tapes and CDs (compact discs) are closing down. Digital downloads distributed over the Internet and mobile phones make it unnecessary to build a music collection in these hard formats.

While this has been a revolution that has made acquiring music as simple as firing up a digital download service like iTunes, it has many downsides as well. One of them has been the loss of vast swathes of musical history, as many songs recorded in the past have not made their way into digital downloads. And how can you find music online if you only remember part of a tune or song and can't remember its title or the musician?

The background and knowledge that was once imparted by an informed person in a music store has been lost in the world of digital downloads.

A Mauritanian music shop is showing how a traditional record store can stay relevant and commercially viable in the 21st century. Entrepreneur Mohamed Vall's Saphire d'Or store in Mauritania's capital Nouakchott (<http://en.wikipedia.org/wiki/Nouakchott>), is a treasure trove of the sort of long-lost recorded songs that normally vex lovers of African music. Pictures of the shop can be seen at the sahelsounds blog (<http://sahelsounds.com/?p=887>).

Vall has run the shop for three decades and amassed a large collection of rare African music on records and tapes. He has married this trove of African creativity to a clever business model: Vall doesn't let customers buy the precious records themselves but instead will transfer the songs to a disc or a USB stick (http://en.wikipedia.org/wiki/USB_flash_drive) for US 30 cents each.

He has also used traditional hospitality to create an atmosphere that encourages people to interact and keep coming back.

"I have the biggest collection in Mauritania," Vall told The Guardian newspaper. "Any music you want from Africa – I mean the kind of music that puts Africa on the map – I have it."

The shop is down an alleyway in the bustling capital and offers a refuge for music lovers.

The atmosphere encourages friendly conversation and lets customers take their time making a selection. Customers can relax in

armchairs while browsing and drink some traditional mint tea or enjoy a snack from a communal bowl.

The shop uses traditional Mauritanian nomadic hospitality to improve the customer experience. It also uses the music it sells to heal rifts between the different cultures that cross Mauritania, as it bridges Arabic-speaking North Africa and the majority black sub-Saharan Africa.

"When you are here, it doesn't matter who you are," Vall said. "We get youngsters wanting 1940s ballads and old people whose minds are musical museums. We get toubabs (white people) who heard one song decades ago."

One of the treasure troves held in the shop is the recordings made by West African orchestras during the post-colonial period.

The shop also acts as an interactive museum and archive of many African musical greats, from Senegal's Youssou N'Dour to Nigerian afrobeat pioneers, Guinean pop legends and Malian and Congolese musicians.

Its collection ranges beyond Africa to take in musical genres from around the world, from blues to salsa to rock.

"The music allows you to travel in your head," said one customer, teacher Abdoul Kaba. "When I first came to Mauritania from Guinea, I went round and round looking for zouk (West African funk) music that everybody listens to in Guinea until I ended up here."

The shop also serves as a sanctuary for many from life's everyday hardships.

"It's not about the music any more. People come back because in here you can be free. You can listen to music and forget this hard life," Kaba said.

4. Global South Eco-cities Show How the Future Can Be

The world is currently undergoing a high-stress transition on a scale not seen since the great industrial revolution that swept Europe in the 19th and 20th centuries. Today's urban and industrial transition involves many more people and is taking place on a greater proportion of the planet. With rapid urbanization comes a demand for middle class lifestyles, with their high-energy usage and high consumption of raw materials.

This is stretching the planet's resources to breaking point. And as many have pointed out, if the world's population is to continue past today's 7 billion to reach 9 billion and beyond, new ways of living are urgently required. Radical thinking will be necessary to match the contradictory goals of raising global living standards for the world's poor with pressured resources and environmental conditions.

But there are innovative projects already under development to build a new generation of 21st-century cities that use less energy while offering their inhabitants a modern, high quality of life. Two examples are in China and the Middle East.

Both projects are seen as a way to earn income and establish viable business models to build the eco-cities of the future. Each project is seeking to develop the expertise and intellectual capacity to build functioning eco-cities elsewhere. In the case of the Masdar City project in the United Arab Emirates, international businesses are being encouraged to set up in Masdar City and to develop technologies that can be sold to other countries and cities – in short, to create a green technology hub akin to California's hi-technology hub 'Silicon Valley'. Masdar City is also being built in stages as investors are found to help with funding. Both projects hope to prove there is money to be made in being green and sustainable.

The Tianjin Eco-city (tianjinecocity.gov.sg) project is a joint venture between China and Singapore to build a 30 square kilometre city to house 350,000 residents.

Tianjin (<http://en.wikipedia.org/wiki/Tianjin>) is a large industrial city southeast of China's capital, Beijing. It is a place that wears the effects of its industrial expansion on the outside. Air pollution is significant and the city has a grimy layer of soot on most outdoor infrastructure.

China has received a fair bit of criticism for its polluted cities as the country has rapidly modernized in the past two decades. This sprint to be one of the world's top economic powers has come at a cost to the environment. In this respect, China is not unusual or alone. Industrialization can be brutal and polluting, as Europe found out during its earlier industrial revolution.

But China is recognizing this can't go on forever and is already piloting many initiatives to forge a more sustainable future and bring development and high living standards back in line with what the environment can handle.

Sino-Singapore Tianjin Eco-city is the second large-scale collaboration between the Chinese government and Singapore. The first was the Suzhou Industrial Park (<http://www.sipac.gov.cn/english/>). The Tianjin project came up in 2007 as both countries contemplated the challenges of rapid urbanization and sustainable development.

The project's vision, according to its website, is to be "a thriving city which is socially harmonious, environmentally-friendly and resource-efficient – a model for sustainable development."

The philosophy behind the project is to find a way of living that is in harmony, with the environment, society and the economy. It is also about creating something that could be replicated elsewhere and be scaled up to a larger size.

The city is being built 40 kilometres from Tianjin centre and 150 kilometres from Beijing. It is located in the Tianjin Binhai New Area, considered one of the fastest growing places in China.

Construction is well underway and can be followed on the project's website (<http://www.tianjinecity.gov.sg/gal.htm>). It will be completed in 2020.

This year, the commercial street was completed and is ready for residents to move in.

Residents will be encouraged to avoid motorized transport and to either use public transport or people-powered transport such as bicycles and walking.

An eco-valley runs down the centre of the city and is meant to be a place for pedestrians and cyclists to enjoy.

The basic building block of the Eco-city - its version of a city block - is called the Eco Cell. Each Eco Cell measures 400 metres by 400 metres, a comfortable walking distance. Four Eco Cells make a neighbourhood. Several Eco Neighbourhoods make an Eco District and there are four Eco Districts in the Eco-city. It is a structure with two ideas in mind: to keep development always on a walkable, human scale and also to provide a formula for scaling up the size of the Eco-city as the number of residents increases.

It is a logical approach and seeks to address one of the most common problems with conventional cities: sprawling and unmanageable growth that quickly loses sight of human need.

Agreement was also reached on the standards that should be achieved for a wide variety of criteria, from air and water quality to vegetation, green building standards, and how much public space there should be per person.

An ambitious project in the United Arab Emirates is trying to become both the world's top centre for eco cities and a living research centre for renewable energy. Masdar City (<http://www.masdarcity.ae/en/>) is planned to be a city for 40,000 people. It is billed as a high-density, pedestrian-friendly development where current and future renewable energy and clean technologies will be "marketed, researched, developed, tested and implemented."

The city hopes to become home to hundreds of businesses, a research university and technology clusters.

This version of an eco-city is being built in three layers in the desert, 17 kilometres from the Emirati capital Abu Dhabi. The goal is to make a city with zero carbon emissions, powered entirely by renewable energy. It is an ambitious goal but there are examples in the world of cities that use significant renewable energy for their power, such as Reykjavik, Iceland in Northern Europe, which draws much of its energy from renewables and geothermal sources.

Masdar City is designed by world-famous British architect Norman Foster (fosterandpartners.com) and will be 6.5 square kilometres in size.

The design is highly innovative. The city will be erected on 6 metre high stilts to increase air circulation and reduce the heat coming from the desert floor. The city will be built on three levels or decks, to make a complete separation between transport and residential and public spaces.

The lowest deck will have a transportation system based on Personal Rapid Transport Pods. These look like insect eyes and are automated, controlled by touch screens, using magnetic sensors for propulsion. On top of this transport network will be the pedestrian streets, with businesses, shops and homes. No vehicles will be allowed there, and people will only be able to use bicycles or Segway (segway.com) people movers to get around. An overhead light railway system will run through the city centre, all the way to Abu Dhabi City.

"By layering the city, we can make the transport system super-efficient and the street level a much better experience," Gerard Evenden, senior partner at Foster + Partners, told The Sunday Times. "There will be no car pollution, it will be safer and have more open spaces. Nobody has attempted anything like this."

Masdar City is being built in stages as funding comes, with the goal of completion by 2016. It hopes to achieve its aspiration to be the most technologically advanced and environmentally friendly city in the world.

As for water supplies in the desert, there is a plan: dew collected in the night and morning and a solar-powered desalination plant turning salt water into drinking water.

Electricity will come from a variety of sources. Solar panels will be on every roof and double as shade on alleyways. Non-organic waste will be recycled, while organic waste will be turned into fuel for power plants. Dirty water will be cleaned and then used to irrigate green spaces. Because of the design, the planners hope the city will just use a quarter of the energy of a conventional city.

To keep the city smart and the project on top of developments in renewable energy, the Masdar Institute of Science and Technology (<http://www.masdar.ac.ae/>) will specialize in renewable energy technology.

The cost for the city was pegged at US \$22 billion in 2009.

The chief executive of Masdar – Abu Dhabi's renewable-energy company - is Sultan Al Jaber. He sees the city as a beacon to show the way for the rest of the Emirate to convert from a highly inefficient consumer of energy to a pioneer in green technology.

"The problem with the renewable-energy industry is that it is too fragmented," he told The Sunday Times. "This is where the idea for Masdar City came from. We said, 'Let's bring it all together within the same boundaries, like the Silicon Valley model (in California, USA).'"

The project needs to gather much of its funding as it progresses. The United Nations' Clean Development Mechanism (<http://cdm.unfccc.int/>) is helping with financing. Companies can earn carbon credits if they help fund a low-carbon scheme in the global South.

The sultan is ambitious and sees this as a "blueprint for the cities of the future."

It has been able to bring on board General Electric (GE) and the Massachusetts Institute of Technology (MIT) to sponsor the university.

It is possible to visit Masdar City and take a tour (<http://www.masdarcity.ae/en/105/visit-masdar-city/>) and it is also possible to view online what has been built so far (<http://www.masdarcity.ae/en/32/built-environment/>)

5. New Journal Celebrates Vibrancy of Modern Africa

Africa has seen huge changes to its communications and media in the past five years. The rise and rise of mobile phones, the expansion of the Internet and the explosion in African blogging and social media, on top of flourishing print and broadcast media, all bring an increasing range of options for telling African stories and increasing dialogue.

With all this new media creating new communications channels – and all the turmoil and change affecting millions as economies and countries change – people need the ability to make sense of it all. One magazine is trying to play that role.

An entrepreneur and multimedia innovator has created a unique publication that is capturing the spirit, ideas and stories of modern Africa. It is a high-quality product, has gathered together talented writers and photographers and is gaining a growing global audience.

Chimurenga Magazine (<http://www.chimurenga.co.za/>) based in Cape Town, South Africa, calls itself a "pan African publication of writing, art and politics." Named for the Zimbabwean Shona word for "revolutionary struggle," it is published three times a year. Editor Ntone Edjabe is from Cameroon and came to Cape Town in the 1990s after the end of South Africa's racist Apartheid regime.

With more than 100 contributors, the magazine offers insight into contemporary Africa, what occupies people's thoughts and how their lives are actually lived.

It is involved in a wide range of other activities, including co-curating a Global South Dialogue Series. And its readership is truly diverse.

"We have readers who are long-term prisoners at Pretoria Central Prison, who have subscriptions that they get to us in coins, and readers who are successful businessmen," Edjabe said to The Financial Times Magazine.

Chimurenga is out to challenge perceptions of Africa. Practicing the art of long-form journalism more associated with established high-end publications like The New Yorker (newyorker.com), the magazine sets out to challenge perceptions about Africa.

"Discourse on Africa is geared towards simplicity," Edjabe told CNN. "Everything must be simple - 'he's a poor black man, he's a victim' - like there has to be a simple story, in a way this is what signifies Africa and global consciousness."

"The moment you bring a degree of complexity to it, it kind of throws people off, they just don't know where to look anymore. It's like, 'what's going on?' So Chimurenga in a way does not try to maintain the superficiality of this narrative - we engage with life, we try to present life as complex as it really is."

Stories in the journal include Billy Kahora writing on the decay of a neighbourhood in Nairobi, Kenya, Michael Abrahams writing about his time in the Cape Town mental hospital after a suicide attempt, and Sean O'Toole following a Zimbabwean immigrant on his journey into South Africa.

The magazine's website carries back issues of the journal, along with a shop selling magazines, books and t-shirts and the "Chimurenga Library," an archive of pan-African, independent periodicals. There's also live online streaming of music - "from ancient techno to future roots" - through the Pan African Space Station radio station, there is a biennial publication of urban life it calls "Africa-style," and the writings of 14 African writers who visited 14 African cities to check-up on life in urban areas.

As an example of the creativity of Chimurenga's talent, a special issue of the magazine tried to better understand the impact of violence in South Africa in May 2008 that led to the deaths of 62 people. It did this by creating a fictitious newspaper called The Chimurenga Chronic (<http://www.chimurenga.co.za/chimurenga-magazine/current-issue>) set during the violence.

The writers are a mix of Anglophones and Francophones, all based in Africa. Common subjects focus on the world of lower-middle class Africa. Examples of past issues show the variety of its content: Conversations With Poets Who Refuse To Speak, Futbol, Politricks & Ostentatious Cripes, Conversations in Luanda and Other Graphic Stories, *We're all Nigerian!

Well-travelled editor Edjabe has studied and lived in Lagos, Nigeria and Johannesburg, South Africa. He has worked as a disc jockey, music writer and basketball coach. He launched Chimurenga in 2002. He told The Financial Times Magazine "I printed 1,000 copies, which I carried around in my bag. I sold it mainly to friends."

It was supposed to be a one-off publication but became a journal, initially written mostly by his friends.

"I found out later that this is how most journals actually begin," he said. "At the time I thought it was unique."

He aspired to get Africans writing about the Africa they saw and lived in. The challenge was changing the dynamic he found of writers only considering something worth writing about if it had been featured in non-African media.

Edjabe had already made his mark with an innovative initiative to show the diversity of what Africa has to offer. Three years after arriving in South Africa he started the Pan African Market (PAM) in Cape Town. An African cultural centre, it began as a craft market with various traders able to run their individual businesses and leasing stall space from the market. PAM became very successful because it brought together Africans from across the continent and offered a vibrant mix of artists, small businesses and food. It now has 33 stores and stalls from 14 countries of Africa. Shoppers can find arts and crafts, hair dressing, tailoring, holistic healing and catering.

Hard copies of Chimurenga are distributed around Africa and sent to Europe, the United States and India.

"There's a feeling about writing something, sharing something that is beautiful and truthful from one's perspective," Edjabe told CNN.

BOOKS

The New Harvest: Agricultural Innovation in Africa by Calestous Juma, Publisher: Oxford University Press. **Website:** http://belfercenter.ksg.harvard.edu/publication/20504/new_harvest.html

The Coming Prosperity by Philip Auerswald, Publisher: Oxford University Press. **Website:** <http://auerswald.org/>

Need, Speed and Greed: How the New Rules of Innovation Can Transform Businesses, Propel Nations to Greatness, and Tame the World's Most Wicked Problems by Vijay Vaitheeswaran, Publisher: HarperBusiness. **Website:** www.amazon.com

Emerging Economies: The Geopolitics of the BRICS Nations Publisher: Stratfor. They make up nearly half the world's population and wield significant influence within their respective regions. Combined, their GDPs are not too far behind that of the United States. Understand the geopolitics of Brazil, Russia, India, China and South Africa. **Website:** www.stratfor.com

China's Regulatory State: A New Strategy for Globalization by Roselyn Hsueh, Publisher: Cornell University Press. **Website:** www.cornellpress.cornell.edu

Living in the Endless City edited by Ricky Burdett and Deyan Sudjic, Publisher: Phaidon. The city is the subject of the 21st century. All over the world, populations are shifting towards urban centres. *Living in the Endless City* depicts an authoritative survey of cities of today and the prospects for our urban future of tomorrow. 36 contributors from across Europe, South America, China, Africa and the U.S. set the agenda for the city - detailing its successes as well as its failures. **Website:** <http://www.urban-age.net/publications/living-in-the-endless-city/>

Consumptionomics: Asia's Role in Reshaping Capitalism by Chandran Nair, Publisher: Infinite Ideas. **Website:** www.amazon.com

World 3.0: Global Prosperity and How to Achieve It by Pankaj Ghemawat, Publisher: Harvard Business School Press. **Website:** www.amazon.com

The China Miracle: Development Strategy and Economic Reform by Justin Yifu Lin, Publisher: The Chinese University Press. **Website:** www.eurospanbookstore.com

The End of Cheap China: Economic and Cultural Trends that will Disrupt the World by Shaun Rein, Publisher: John Wiley and Sons. **Website:** www.amazon.com

Global Slump: The Economics and Politics of Crisis and Resistance by David McNally, Publisher: PM Press. *Global Slump* analyzes the global financial meltdown as the first systemic crisis of the neoliberal stage of capitalism. It argues that – far from having ended – the crisis has ushered in a whole period of worldwide economic and political turbulence. In developing an account of the crisis as rooted in fundamental features of capitalism, *Global Slump* challenges the view that its source lies in financial deregulation. **Website:** https://secure.pmpress.org/index.php?l=product_detail&p=271

Creative Ecologies: Where Thinking is a Proper Job by John Howkins, Publisher: UQP. **Website:** www.creativeeconomy.com/think.htm

Breakout Nations by Ruchir Sharma, Publisher: Penguin. *Breakout Nations* offers journeys through more than two dozen of the most interesting economies in the emerging world. **Website:** <http://breakoutnations.com/>

Light Manufacturing in Africa by Hinh T. Dinh et al, Publisher: World Bank. This book examines how light manufacturing can offer a viable solution for sub-Saharan Africa's need for structural transformation and productive job creation, given its potential competitiveness based on low wage costs and an abundance of natural resources that supply raw materials needed for industries. **Website:** <http://issuu.com/world.bank.publications/docs/9780821389614>

Why Nations Fail: The Origins of Power, Prosperity and Poverty by Daron Acemoglu and James A. Robinson, Publisher: Profile Books. **Website:** www.amazon.com

Arrival City by Doug Saunders, Publisher: Pantheon. A third of humanity is on the move. History's largest migration is creating new urban spaces that are this century's focal points of conflict and change — centres of febrile settlement that will reshape our cities and reconfigure our economies. **Website:** <http://arrivalcity.net/>

China: And the End of Poverty in Africa – Towards Mutual Benefit? by Penny Davis, Publisher: Diakonia and the European Network on Debt and Development. **Website:** www.eurodad.org/uploadedFiles/Whats_New/Reports/Kinarappo_A4.pdf

July

Have an event you would like the South-South community to know about? Then send details to developmentchallenges@googlemail.com.

August

Biodiversity Asia 2012: Science, Policy, and Governance

Bengaluru (Bangalore), India (7-10 August 2012)

This international conference is being organized in India to highlight the urgency of biodiversity conservation in Asia ahead of the 11th Conference of the Parties (CoP) of the UN Convention on Biological Diversity (CBD) to be held in India in October 2012. Biodiversity Asia 2012 will bring together researchers, policy makers, managers, students, teachers, NGOs, activists, and others working towards the conservation of Asia's biodiversity.

Website: <http://www.scbasia2012.org/>

3rd International Conference on Research for Development

Bern, Switzerland (20-22 August 2012)

Participants in the conference are expected to bring in multiple national and international perspectives on development-oriented research, policy dialogue, and practice aiming towards global transformation. The conference will have a strong focus on the global South; but the role of the global North will also be addressed. Further emphasis will be given to discussing research policy and funding in the North, including in Switzerland. In addition, the conference will take into account and critically review the outcomes of the international 'Planet under Pressure' science conference (London in March 2012) and Rio+20 (Rio de Janeiro in June 2012), and discuss the consequences of these global events for research partnerships.

Website: <http://www.icrd.ch/>

World Water Week

Stockholm, Sweden (26-31 August 2012)

Each year the World Water Week addresses a particular theme to enable a deeper examination of a specific water-related topic. While not all events during the week relate to the overall theme, the workshops driven by the Scientific Programme Committee and many seminars and side events do focus on various aspects of the theme. The current niche for 2009-2012 is "Responding to Global Changes", which looks at the potential and necessary responses in water policy, management and development to address pervasive and increasingly impacting global changes.

Website: <http://www.worldwaterweek.org/>

September

The Second Global Conference on Agriculture, Food Security and Climate Change

Ha Noi, Vietnam (3-7 September 2012)

Co-organized by Viet Nam and the Netherlands, in close collaboration with other partners, including FAO and the World Bank, the conference will allow global leaders, practitioners, scientists, civil society and the private sector to share experiences and demonstrate how early action on *Climate-Smart Agriculture can act as a driver of green growth*.

Website: <http://www.afccconference.com/background-note>

6th International Hybrid Rice Symposium

Hyderabad, India (10-12 September 2012)

The symposium aims to create a discussion platform that tackles the issue of increasing rice yields to adapt to the world's increasing demand for rice. The symposium will discuss the topics: Hybrid Rice Development; Hybrid Rice Seed Production; Applications of Molecular Technology; Crop and Resource Management, and; Hybrid Rice Economics.

Website: <http://hybrid-rice.org/>

The World of Rural Co-operation International Roundtable Event - How Rural Co-operative Enterprises Build a Better World

Dublin, Ireland (11-12 September 2012)

This invitation only roundtable event will be used to debate and discuss the impact and future of rural co-operation worldwide. This prestigious event will be a unique opportunity to share knowledge and expertise with rural co-operators from across the world to inform the development of a plan for the future development of rural co-operatives worldwide.

Website: <http://www.rural2012.coop/>

Annual Meeting of the New Champions 2012

Tianjin, People's Republic of China (11-13 September 2012)

The Annual Meeting of the New Champions is the foremost global business gathering in Asia. After five years, it is widely known as the Summer Davos – reflecting the "spirit of Davos" that for more than four decades has meant openness, collegiality and frank, yet friendly, exchange among leaders from business, government, academia, civil society and media.

Website: <http://www.weforum.org/events/annual-meeting-new-champions-2012>

Making Cents' 2012 Global Youth Economic Opportunities Conference

AWARDS AND FUNDING

World Summit Youth Award

The international contest for young people using the Internet and mobiles to take action on the UN Millennium Development Goals. **Website:** www.youthaward.org

Grand Challenges Canada: Request for proposals

Grand Challenges Canada is pleased to announce a new initiative in its Maternal, Neonatal and Child Health grand challenge. It's called Saving Brains. Its goal is to unlock potential in children and dramatically transform lives in the developing world. The money to fund this program comes from the Development Innovation Fund. In Budget 2008, the Government of Canada committed \$225 million CAD over five years to the Development Innovation Fund, to support the best minds in the world in a collaborative search for solutions to global health challenges. For the Request for Proposals: **Website:** http://www.grandchallenges.ca/wp-content/uploads/2011/05/Request_for_Proposals-Saving_Brains_EN.pdf

Zayed Future Energy Prize

The world is in desperate need of innovative solutions to create a new, sustainable energy future. No one knows who or where the next great energy solution will come from. Solutions and technologies that could change the world are being developed globally, and the \$2.2 million Zayed Future Energy Prize, managed by Masdar in Abu Dhabi, recognizes and rewards innovation, leadership, and long-term vision in renewable energy and sustainability.

Website: www.zayedfutureenergyprize.com/

Philips Liveable Cities Award

Philips is looking for individuals and community or non-government organizations and businesses with ideas for "simple solutions" that will improve people's health and well-being in a city to enter the Philips Liveable Cities Award. To help translate these ideas into reality, three Award grants totalling €125,000 are on the line. One overall winning idea from any of the three categories outlined below will receive a grant of €75,000, while the two additional ideas will receive grants of €25,000.

Website: <http://www.because.philips.com/livable-cities-award/about-the-award>

Piramal Foundation in India

Has established a US \$25,000 prize for ideas that help advance full access to effective public health care in India. The Piramal Prize is a \$25,000 Social Entrepreneurship Competition focused on democratizing health care in India that seeks to encourage and support bold entrepreneurial ideas which can profoundly impact access to higher standards of health for India's rural and marginalized urban communities. The award recognizes high-impact, scalable business models and innovative solutions that directly or indirectly address India's health-care crisis.

Website: www.piramalprize.org

Special Award for South-South Transfer

The aim of the award is to identify, provide visibility, and honour those who have successfully shared their projects and approaches internationally, thereby increasing the impact of the initiative. The winning practice receives US \$15,000 to further transfer the awarded practice to other communities in developing countries.

Website: www.southsouthexpo.org

South-South Experience Exchange Facility

Supported by Mexico, China, India, Denmark, Spain, The Netherlands, and the U.K. and now Colombia, the South-South Experience Exchange Facility is a multi donor trust fund that promotes the idea that developing countries can learn from the successes of other developing countries in overcoming similar challenges. In the past 12 months, the trust has given out 35 grants to countries for learning activities ranging from working with at risk youth in the Caribbean to outsourcing IT services in Africa.

Website: www.southsouthcases.info

African Writers Fund

Together with the Ford Foundation, the Fund supports the work of independent creative writers living on the continent. The Fund recognizes the vital role that poets and novelists play in Africa by anticipating and reflecting the cultural, economic and political forces that continuously shape and reshape societies.

Website: www.zunia.org

Catalogue of Poverty Networks

UNDP is organizing an online catalogue of Poverty Networks as a means to facilitate access to knowledge and sharing this to a wider audience in 189 countries. Poverty Networks are web-based platforms that provide space for sharing and disseminating development-related information and initiatives. Below you will find information on IPC's collaborating networks, which help foster dialogue between researchers, policymakers, civil society and multilateral organizations.

Development Crossing

Development Crossing was set up in 2006 by a small group of friends with diverse backgrounds ranging from business consulting to international development. In a world where the environment, corporate responsibility, and sustainable development are becoming increasingly intertwined, our goal was to create a site where individuals that shared our passion could keep up-to-date with relevant happenings in the world and connect with like-minded individuals. The idea behind Development Crossing is to provide a social network that brings together people from a variety of sectors, countries and professions to discuss corporate social responsibility and sustainable development.

Website: www.developmentcrossing.com

DevelopmentAid.org

The one-stop-information-shop for the developmental sector, DevelopmentAid.org is a membership organization that brings together information for developmental professionals, NGOs, consultancy firms and donors.
